

iOS Installation

3.4 Remove License

On a day-to-day basis, you would never need to remove a license from your app. However, it is required in some situations, such as when you want to migrate an existing license to a newer device or when your current device is no longer operational. You can remove the following licenses from your device using the remove license option.

- SY3 license,
- In-App license,
- Portal License

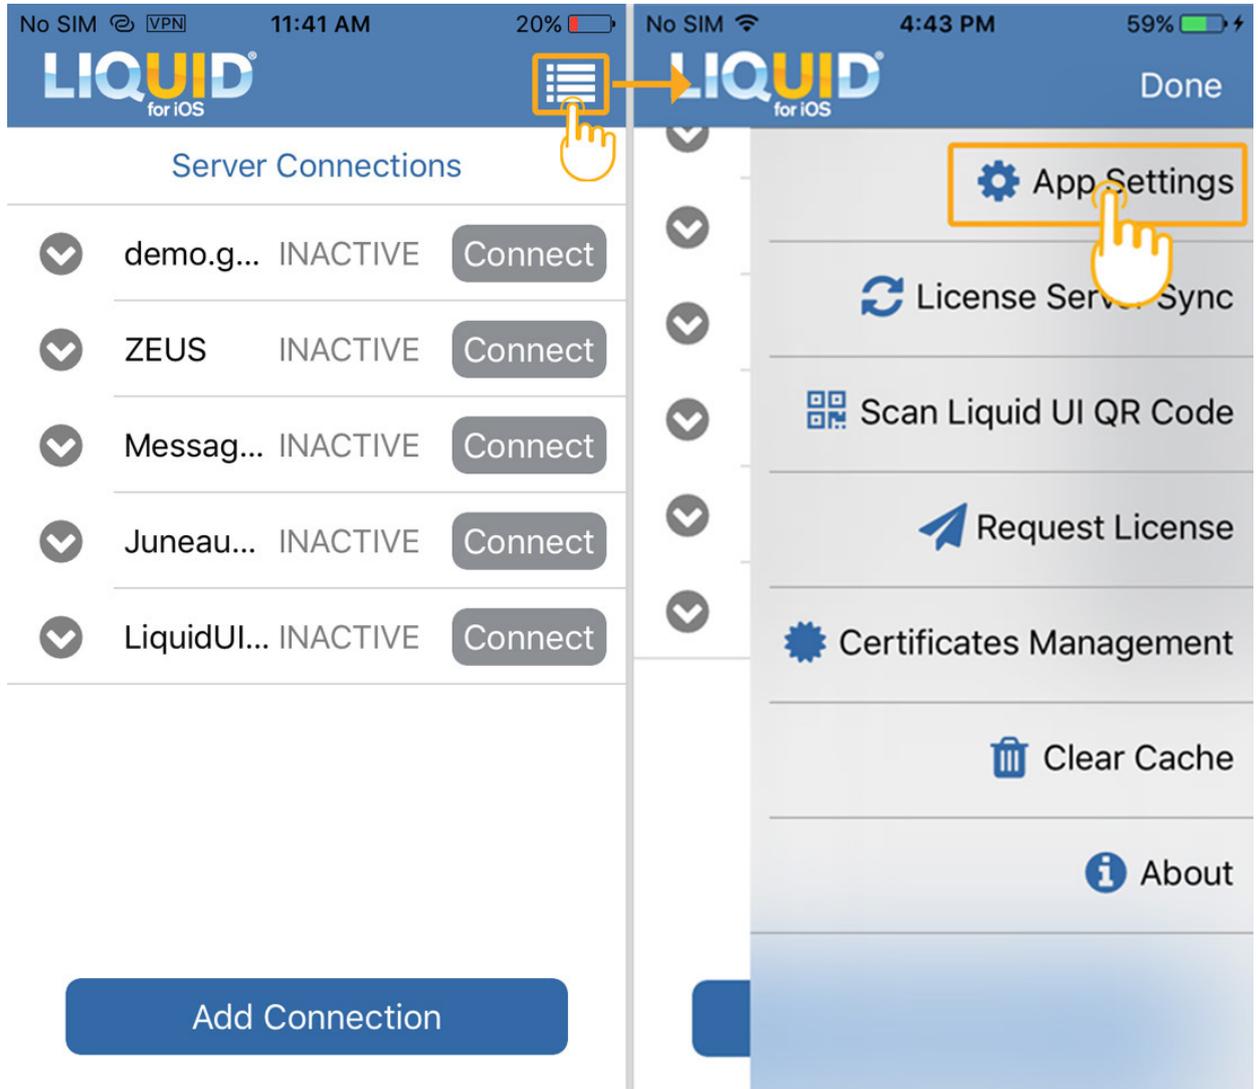

The following steps showcase how to remove the license from the device.

Note: You can automatically manage the license on your device using the [Liquid UI and Access Management Portal](#).

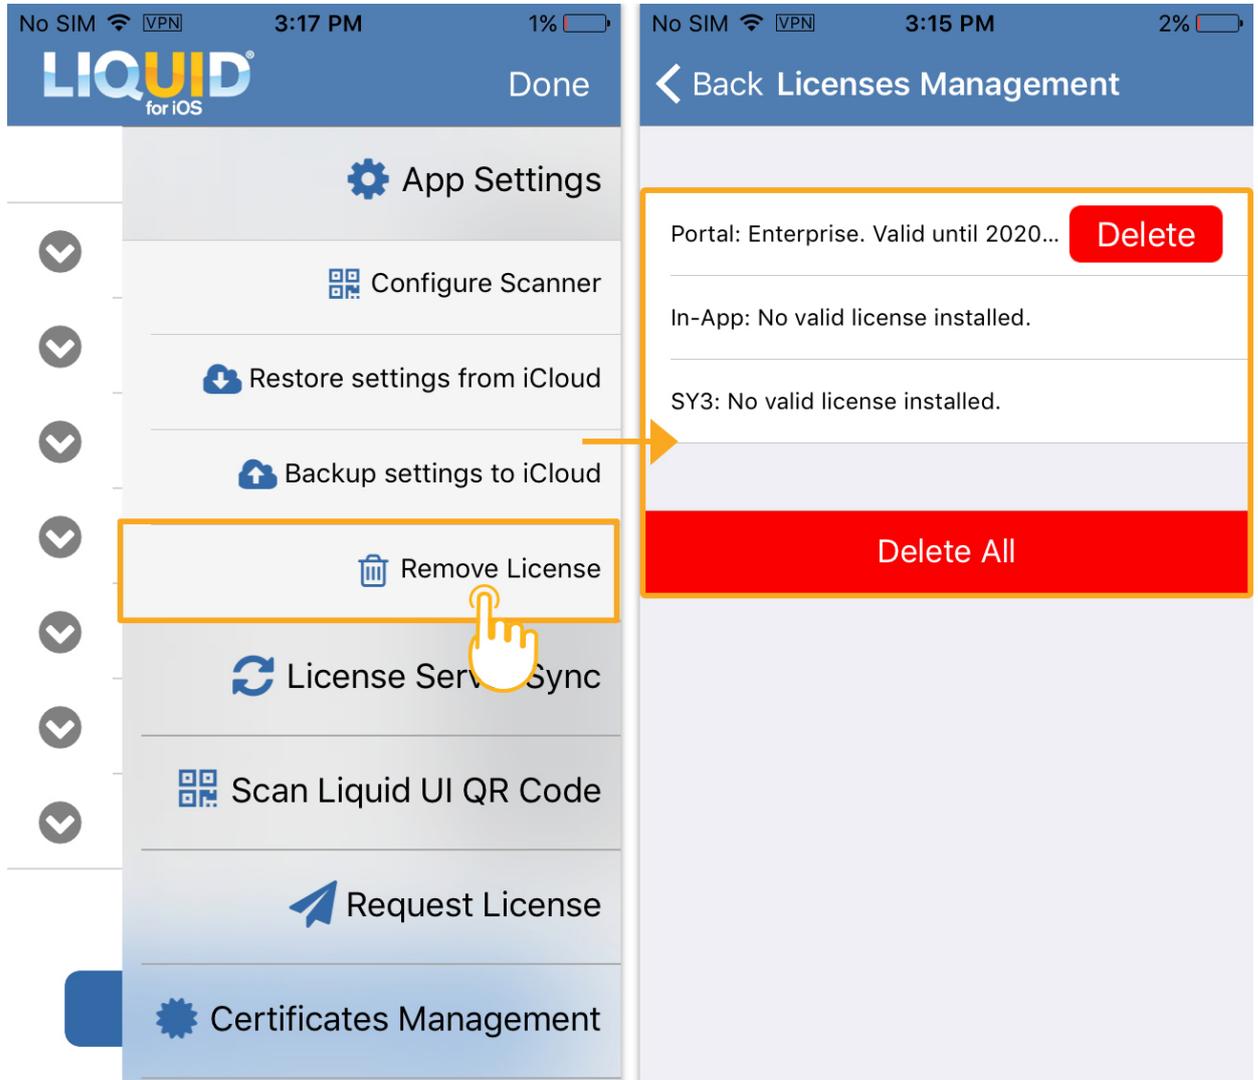

1. Launch Liquid UI. Click the **Main Menu** icon  present on the upper right corner of the server connections screen, and then select **App Settings**, as shown below.

iOS Installation

2. To remove the license from your device, click the **Remove License** option, which will navigate you to the License Management screen, as shown below.

iOS Installation

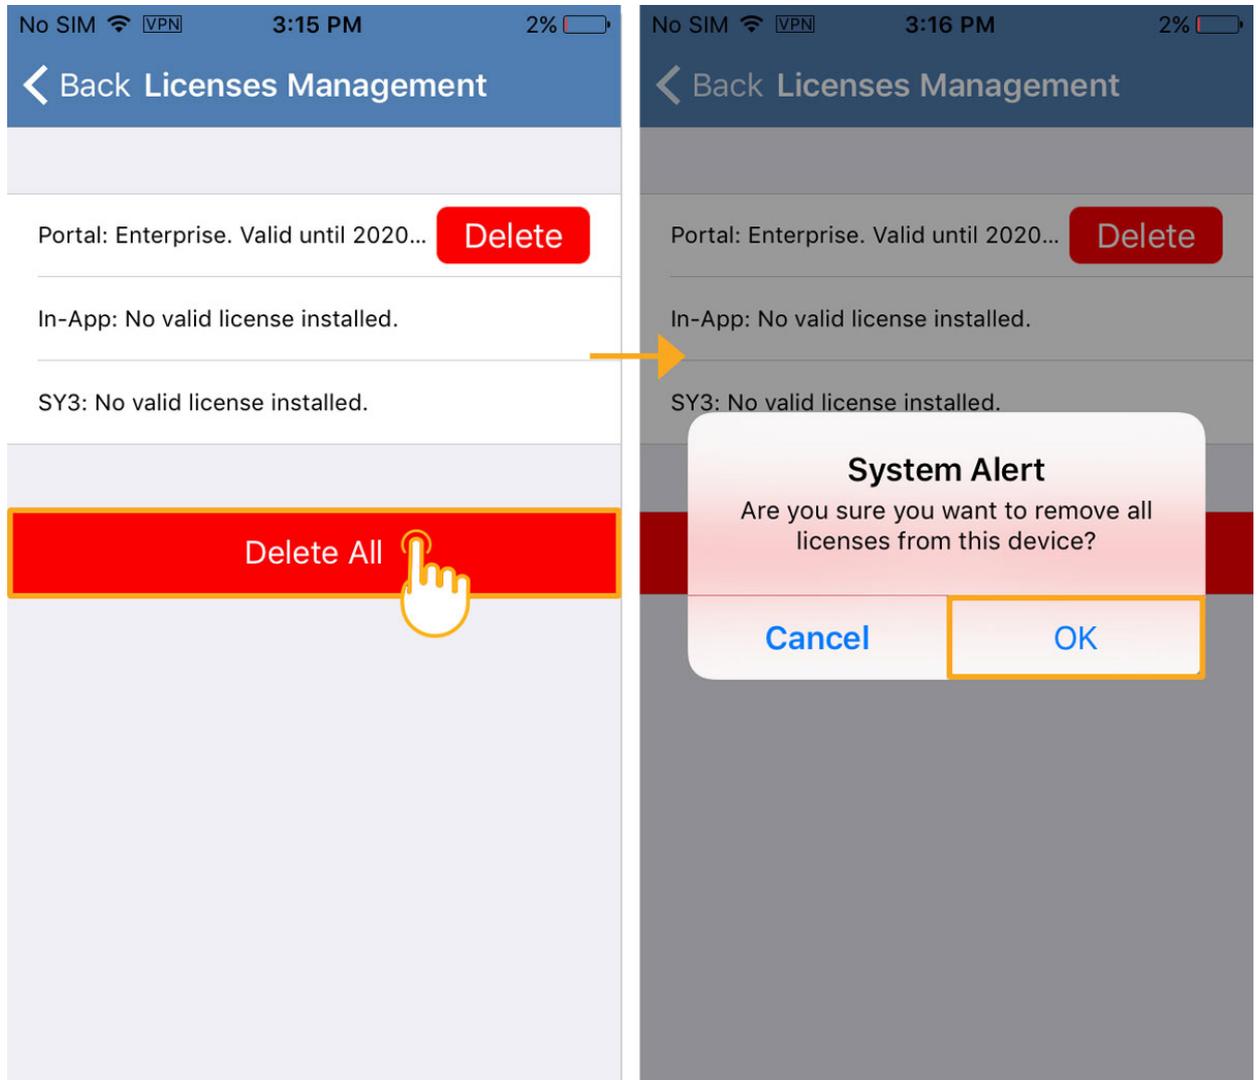

3. Click the **Delete** option, located right next to the installed license. You will see a **System Alert** pop-up message asking you to confirm the license removal from your device and click **OK** to delete the license.

Note: You can remove all installed licenses from your device, including **Portal**, **In-App**, and **SY3** licenses.

iOS Installation

4. Click the **Delete All** option to delete all the licenses from your device. You will see a **System Alert** pop-up message asking you to confirm the removal of the licenses, and click **OK** to delete all the licenses.
