

# iOS Installation

## 3.3.4 Enterprise License

Licensing allows you to access all the features supported by the Liquid UI app on your iOS device. An enterprise license supports all the bells and whistles of Liquid UI technology, including SAP native connect, single sign-on, Barcoding, SAP customization, and many more.

**Note:** To know more about the features supported, [click here](#).

Without a valid license, your access will be restricted to a few transactions at a time, i.e., 50 data packets. Also, you would not have access to all the features and functionality.

To buy the enterprise license, please send us an email at **rfi@guixt.com** or call us at +1(650) 341-3310 with the following details.

- SAP installation number
- SAP system ID

# iOS Installation

**Note:** You can find this information in the SAP status window.

The Liquid UI provides an **Enterprise License** through the **Liquid UI Access Management Portal (LAMP)** in bulk, with more features apart from the Client license. LAMP is a customer self-service web portal, used for registering and managing your newly purchased or upgraded product licenses.

Liquid UI Access Management Portal allows organizations to:

- Deploy product licenses and SAP connections over the air
- Manage bulk licenses and SAP connections
- Track license usage

The portal eases the process of generating and sharing licenses among multiple instances as required for different situations, such as different departments, teams, company users, and more. This adds a measurable benefit to the organization and users.

To know how to request a license and manage the licenses in bulk, refer to the [Liquid UI Access Management Portal](#).
